

# 1N1P - No longer a DREAM

Hospital Authority Convention 2025

Presenter: Dr. YAU Ching-ying Jane, QEHD DOM(A&E)

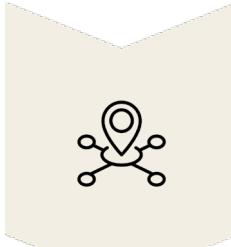

# Smart PALM (Personal Assistant Light and Mobile)

- Smart Personal Assistant Light and Mobile (PALM) is a small mobile handheld device with built-in **barcode scanners** and near-field communication (NFC) readers
- It provides information **storage**, **computing** and **data retrieval**
- All Smart PALM used in clinical area must be in medical grade

# Why do nurses need a Smart PALM?

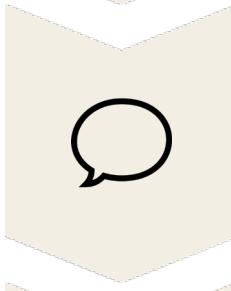

- The use of Smart PALM in healthcare settings is proven to **enhance effectiveness and efficiency** by providing appropriate information in a **just-in-time** manner
- Some showed that the use of Smart PALM would help to **minimize medical errors and improve decision-making**
- Smart PALM designed as a specialized tool to **streamline workflows, improve efficiency, and enhance patient care quality**
- Since mid-2000's, the use of Smart PALM started to be adopted in nursing professional education and subsequently used as a tool for clinical documentation and health care practices in the Northern America and some European countries

# Why Personal Assistant Light and Mobile for Nurse?

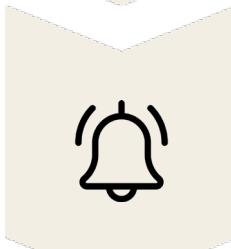

## Mobility

Access systems for patient information anytime anywhere

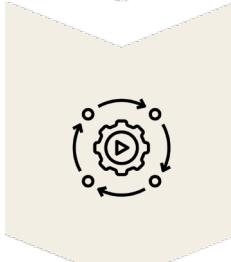

## Effective Communication

Minimize manual transcriptions through digitalizing documents and real time data access

## Critical Alerts

Instant notifications for urgent clinical conditions

## Streamline Workflow

Reduce time spent on administrative tasks and minimize disruptions

# Patient Journey with PALM in Kowloon Central Cluster

## A&E

- Real Time Location System
- Oxygen Therapy Checklist

## Wards

- Nurse Call / Phlebotomist Call / Houseman call (CCMAP)
- Antimicrobial Resistance (AMR) Decolonization Service
- Oxygen Therapy Checklist
- Patients' Belonging Tracking System
- Central Monitoring System

## Admission

## Hospitalization

## Discharge / Transfer and Follow-up

### DIR / Allied Health

- General Xray booking
- Oxygen Therapy Checklist

### NEATS

- Oxygen Therapy Checklist

### CR Hospital

- Oxygen Therapy Checklist
- Patients' Belonging Tracking System

# Showcase: Admission [A&E]

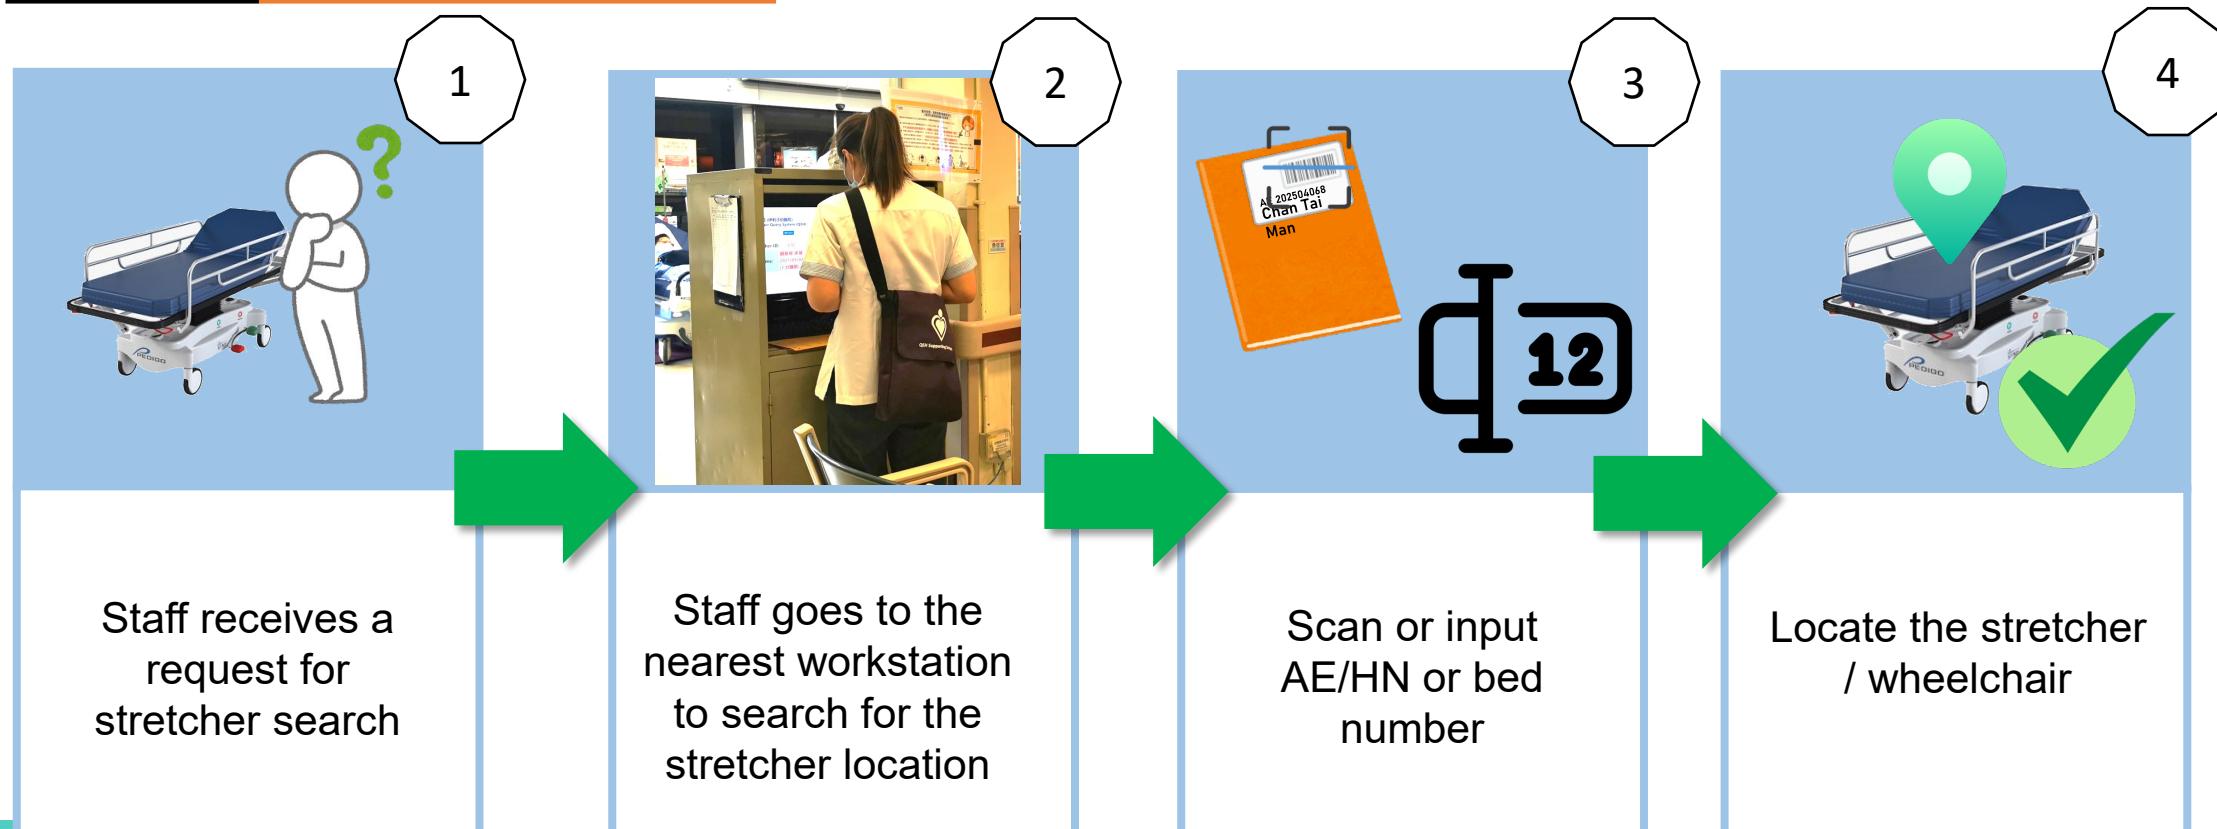

# Real Time Location System

# Real Time Location System (RTLS)

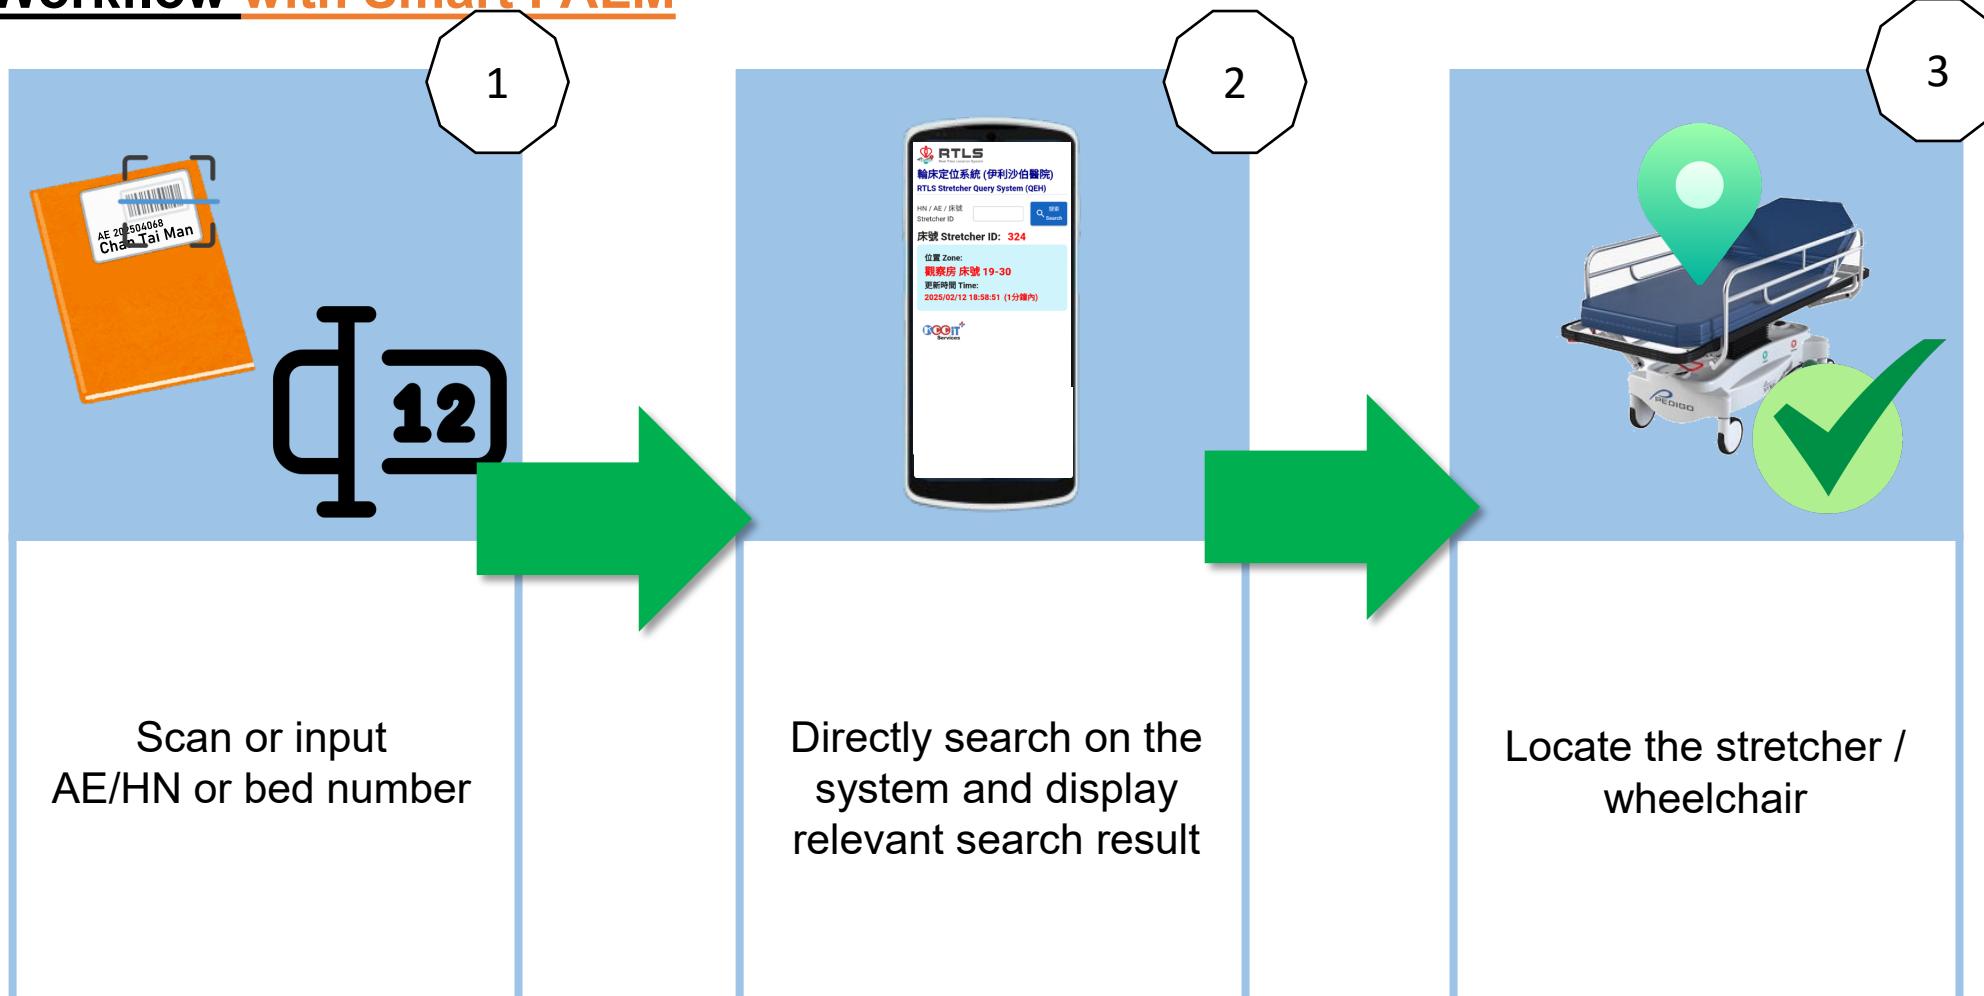

- Using Bluetooth RSSI (Received Signal Strength Indicator)
- Reduce the searching time for staff on locate stretcher and wheelchair
- Provide up-to-date location information of medical equipment
- Streamline A&E stretcher and asset's turnover (or circulation) process

## Workflow without Smart PALM

# Real Time Location System (RTLS)

## Workflow with Smart PALM

# Real Time Location System (RTLS)

✓ Saved **1,200** minutes on stretcher searching time in AED per day, equivalent to **2.5 FTE**.

 probability  
**100%**

**RTLS**  
Real Time Location System

Average min. used  
**2 min.**

**Save 3 min. and 60% of search time**

# Oxygen Therapy Checklist

# Oxygen Therapy Checklist

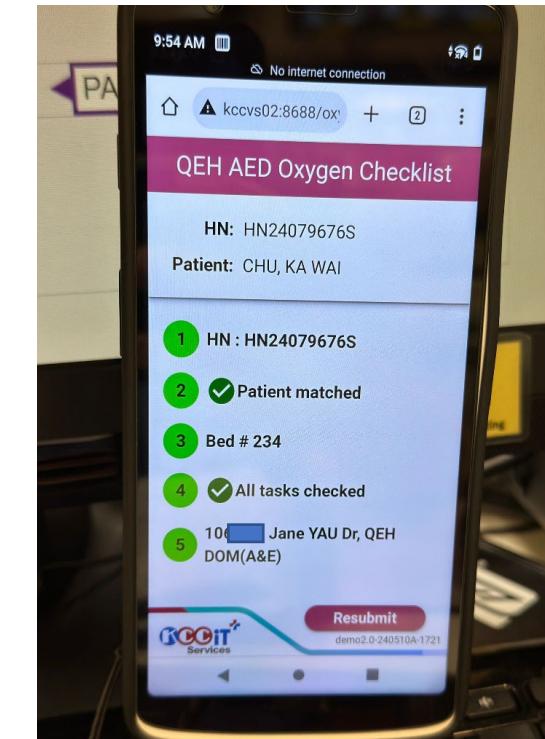

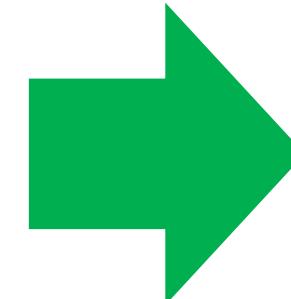

- Streamline oxygen checklist workflow for patient transfer in QEH
- Paperless full solution
- Reduce the chance of lost record and ensure the form has been filled before patient move to next location

# Antimicrobial Resistance (AMR) Decolonization Service

- Reduced waiting time of decolonization service
- Significantly increased compliance
- Average compliance rate from 01 Feb to 10 Feb is 95.7%
- Reduced possibility of MDRO outbreak

Comparison before and after Smart PALM Adopted			
	Without PALM	With PALM	% Changes
Compliance	60.65%	90.46%	+ 30%
Average Job Complete Time	~30 – 40 mins	~ 20-25 mins	- 37.5%
Average patient waiting time	~12 hours	~ 7 Hours	- 41.6%

# Central Monitoring System

# Central Monitoring System

# Central Monitoring System

- Nurses can aware patient vitals instantly even they are not
- Instant alert to nurse if any vitals is abnormal
- Reduced time spent travelling back to nurse station

# Showcase: Discharge and transfer

# Patient Belongings Tracking System (PBTS)

# Patients' Belonging Tracking System

## Objectives:

- Facilitates tracking of patient's belongings during inter-hospital transfer in KCC
- Minimizes the risk of mis-handling of patient's belongings
- Speeds up the process to locate the missing item

# Patients' Belonging Tracking System

1 Ward make request in the Patients' Property Tracking System and stick the label to the Patient's property

Stage 1

2 Patient transfer to NEATS waiting area

3 The porter staff will scan the patient's wristband and scan the property's label

Stage 2

4 Patient transfer via NEATS to CR hospital

5 CR's porter staff will scan the patient's wristband and scan the property's label

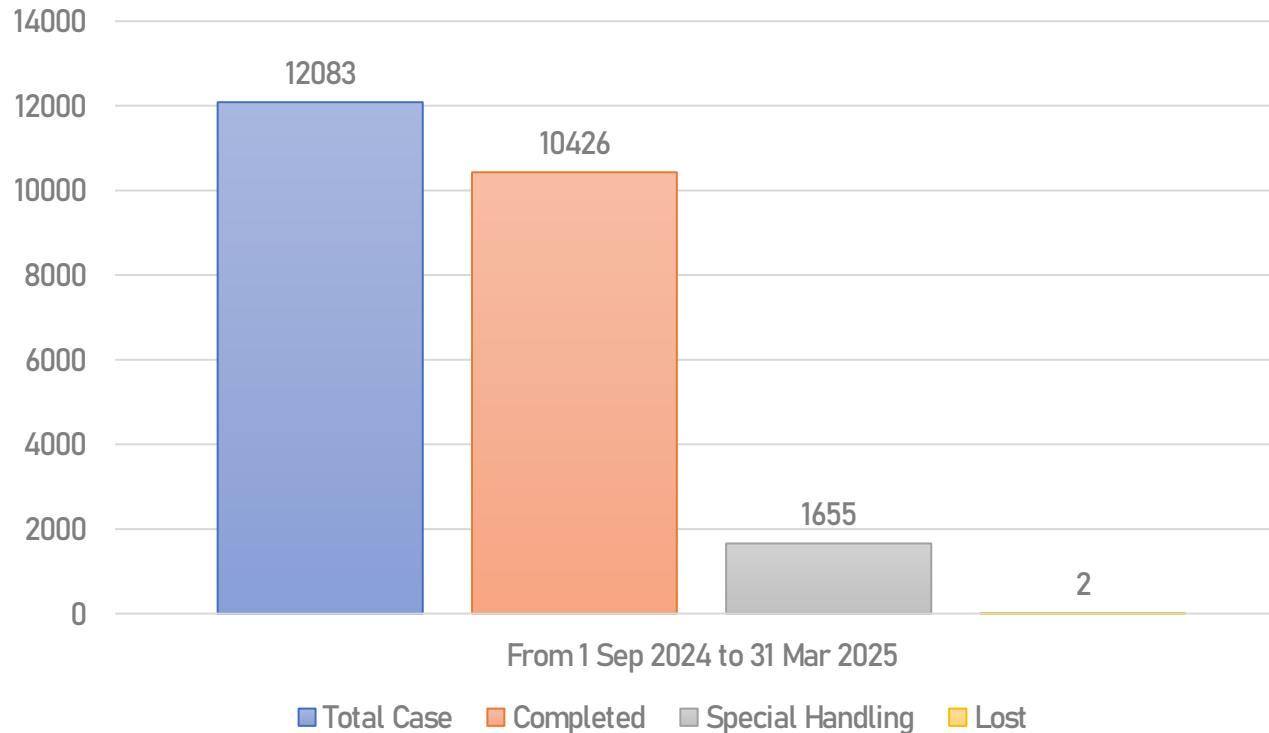

6 Patient transfer to destination's ward

7 Destination ward will check the quantity of the patient's property in the system

# Patients' Belonging Tracking System

Performance of Patients' Belonging Tracking System

	# of cases	Percentage
Completed	10426	86.28%
Special Handling	1655	13.69%
Lost	2	~ 0.01%
Total	12083	100%

## Way forward

- Positive users' feedbacks and enhanced service efficiency in previous application experiences. The device was proven to be a **feasible and convenient tool for clinical operations** in the future.
- Yet, **integration with corporate systems** and developments of **appropriate functions** or **suitable applications** for the possibility of immediate access of information to facilitate are needed

# Acknowledgment

Gratitude and special thanks to the listed person or teams for their contributions and support in the Smart Palm projects.

- Dr. Eric CHEUNG, KCC CCE/QEH HCE
- Ms. LI Wah-chun, KCC CGM(N)/QEH GM(N)
- Dr. Calvin MAK, Cons(NEUR)/KCC, CC(IT/IS)
- Mr. Wallace CHENG, KCCIT SSM
- Mr. Alex LAU, KCCIT SM3
- KCCIT Smart Hospital and Innovation Office
- QEH Central Nursing Division
- QEH clinical user departments
- QEH Infection Control Team

Innovating **T**ogether

Thank you ^
